

- Subject** ▶ Change of Torque Limiter Complete
- For Models** ▶ HR3000C, HR3550C, HR4040C, HR4500C
- Country** ▶ All countries
- Description** ▶ Adhesive has been applied to Pin 4 in Torque Limiter Complete to prevent the Pin 4 from coming out of place.

Torque Limiter without Pin 4 may cause a Round Nut to rotate, resulting in the torque out of presetting. To avoid such trouble, this addition of adhesive has been made. (However, Pin 4 in the Torque Limiter Complete which is installed on Rotary Hammers does not come out of place. Accordingly, this change is applicable to Torque Limiter as a replacement part only.)

Note: Regarding Torque Limiter Complete as a replacement part please check the Torque Limiter for Pin 4's presence. When Pin 4 is not present, insert Pin 4 in the portion where the notch on the Driving Nut of the Torque Limiter meets that of a Round Nut of the Torque Limiter as shown on right. Caution: Be careful not to drop Pin 4 at the time of repairing. Please use LOC TITE 603 (Part No. 045047-7A) as a adhesive.

Interchangeability(I/C)

Item No.	Current part		Q'ty	I/C	New part		Q'ty	Note
